Run C++ on Terminal for MacOS

1. Change the code file to .cpp.
2. Go to the terminal and go to the place where the file locates by typing:
>>> `cd <place>`
3. When locate at the right place, type this command to create the "a.out" file by typing:
>>> `g++ <code file>.cpp`
4. Running the "a.out" file by this command:
>>> `./a.out`

The terminal will run the code DONE!!!
